Electronic Limited Technical Inspection (LTI) and System Integration Solution

1. The requirement describes both the provision of COTS/GOTS handheld data capture devices and the development of bidirectional interfaces with DMLSS and MAVEN. Does the Government anticipate these being awarded under a single contract, or is it open to a structure in which the hardware and the software integration are separable, either as distinct awards or as a prime/subcontractor arrangement?
 - a. Answer: The determination regarding a single vs multiple award has not been made at this time. The intent of this Request for Information is to gather enough information to make this determination.
2. What constraints does the Government anticipate with respect to personnel citizenship, place of performance, and physical or logical access to DMLSS and MAVEN environments, both for prime contractor personnel and for subcontractor personnel supporting the software integration?
 - a. Answer: All contractor and subcontractor personnel requiring physical base access or logical access to DMLSS, MAVEN, and the Marine Corps Enterprise Network (MCEN) must be U.S. citizens, possess a favorable background investigation (minimum Tier 1/T1 for CAC issuance, or Tier 3/T3 for Secret clearance if accessing sensitive data), and complete all mandatory DoD cybersecurity training. Remote/off-site development is permissible at contractor facilities; however, physical integration testing, training, and deployment support will primarily take place on-site at Camp Lejeune, NC, with potential expansion to Camp Pendleton, CA, and Camp Kinser, Okinawa, Japan.
3. Regarding the RMF/ATO requirement: does the Government expect the vendor to pursue a standalone ATO for the solution, or would the solution be expected to operate under an existing DMLSS or MAVEN authorization boundary?
 - a. Answer: The Government is open to a solution that operates either under its own standalone Authorization Boundary (ATO) or as an integrated sub-system within an existing DMLSS/MAVEN authorization boundary. Regardless of the final boundary determination, the Contractor will be responsible for developing, compiling, and maintaining all required Risk Management

Framework (RMF) artifacts (per DoDI 8510.01) required to achieve a favorable Authority to Operate (ATO) from the Marine Corps Authorizing Official (AO).
